

University Region

The University Region serves ten counties in the heart of south-central Michigan including Clinton, Eaton, Hillsdale, Ingham, Jackson, Lenawee, Livingston, Monroe, Shiawassee and Washtenaw. The University Region's central location makes it the "crossroads" of the lower peninsula, with six major freeway corridors (I-69, I-75, I-94, I-96, US-23 and US-127) passing through the region as part of the national network of highways that supports commerce and international trade. Three Transportation Service Centers (TSC) conduct core business activities of the Department in the Region: the Brighton TSC serves Livingston, Washtenaw and Monroe counties; the Lansing TSC, serves Clinton, Eaton, Ingham and Shiawassee counties, and; the Jackson TSC serves Jackson, Hillsdale and Lenawee counties.

The University Region is home to the state capitol and governmental functions, institutions of higher learning, including the state's two largest - the University of Michigan and Michigan State University, industrial and commercial centers and agricultural lands. This wide array of customers who depend on the surface transportation system provide exciting challenges for MDOT to continually find better ways to understand and meet their most important needs.

Past Accomplishments

In 2002, the University Region shifted its primary focus from improving the freeway system to addressing the infrastructure needs in the Region's central business districts. The coordination of projects by the road agencies has been successful in easing disruption to local communities. See highlights of 2002 accomplishments below:

- **The US-127 project in Jackson County** was initiated in 2002 and will address the condition needs of 6.8 miles of **US-127 between I-94 and M-50**. This project includes complete removal and replacement of the pavement, upgrades to guardrail and improvements to eight bridges and five interchanges along the corridor. The US-127 reconstruction project was originally scheduled to take two years. Using a unique incentive program, the majority of the construction work was completed in 2002 which will ultimately allow an earlier completion of the project in 2003. During this reconstruction project, the University Region worked closely with other local agencies and the media to provide detailed construction project information to coincide with race weekends at Michigan International Speedway near the Village of Brooklyn
- The University Region continues to focus on projects that incorporate local sponsorship and participation. With the donation of property from business owners located along **M-50 (West Avenue) in the City of Jackson**, the Region was able to reconstruct and widen M-50 from four lanes to five with a center turn lane
- While focusing on non-freeway improvements, the University Region continues to address the condition of the freeway system.

In 2002, the Region reconstructed a portion of **the I-96 freeway which included the repair or reconstruction of 16 bridges west of the City of Lansing**. This project contributed to the economic vitality of the area by providing improved transportation infrastructure to serve the new General Motors plant expansion in Delta Township.

- With local agency right-of-way acquisition and funding participation, the Region was also able to reconstruct and make capacity improvements to **the I-94/Zeeb Road interchange in Washtenaw County**. Construction was completed in 2003.
- Also, during 2002, a reconstruction project for portions of **M-21 (Main Street) and M-71 (Water Street) in the City of Owosso** was completed and,
- A reconstruction project for **M-43 (Grand River Avenue) through the City of Williamston** began in 2002 and will be completed in 2003.

Furthermore, as with other projects within the Region, incentives for early completion have been offered to improve the timeliness of the construction activities. MDOT's University Region will continue to focus on projects that have significant local participation and that address those condition needs that are matched with needs for safety, operational and capacity improvements. Specific studies are ongoing for the improvement of the M-59 corridor between I-96 and US-23 in Livingston County, the I-94 corridor between M-60 and Sargent Road in Jackson County and the US-12 Corridor between the City of Saline and I-94 in Washtenaw County.

Five Year Road and Bridge Program

The projects identified in this 2003 to 2007 Five Year Road and Bridge Program for the University Region total approximately \$418 million. Investments are allocated in the following manner:

Preserve First	\$ 40 Million
Road & Bridge Preservation	\$352 Million
Capacity Improvements & New Roads	
Construction	\$ 14 Million
Design & Pre-Construction Activities	\$ 12 Million

There are a number of programs that are selected based on statewide priorities or where project identification is completed throughout the year. These investments are not reflected above, but are included in the statewide investment strategy.

The University Region includes some of the fastest growing areas in the state of Michigan. Portions of the Region are located near the Metropolitan Detroit area. Special attention will be given to improving operations and maximizing the capacity of the existing highways at or near these high-growth areas.

Operational improvements for the interchanges of US-23 at M-59, and US-23 at Plymouth Road are included in this edition of the five-year plan. M-52 (Main Street) through the Village of Perry will be reconstructed in 2003 as will M-50 in the Village of Brooklyn. Through the coordination of local agencies, the M-43, M-52 and M-50 reconstruction projects will incorporate streetscape improvements during the road reconstruction

In addition, Region and TSC staff are working proactively with local units of government to identify ways, such as access management, to improve operational efficiency and safety, and to get the most out of the current surface transportation system.

Consistent with the State Transportation Commission Policy, Region and TSC staff are proactively investigating opportunities to improve the aesthetics of our highways and bridges. When and where practical, aesthetic treatments are included in the design features of bridge structures and roadsides. During the planning stages of urban reconstruction projects, MDOT works with local communities to identify and pursue funding for streetscape and landscape improvements. Specific improvements are planned for highly visible areas of the region, including major freeway interchanges and entryways into the state from Ohio.

Corridor Improvement Strategies

The University Region continues to use a corridor approach to develop construction projects. All elements of the transportation system within a corridor are evaluated and repaired or rebuilt when work is planned.

This reduces the number of times major construction occurs in a given area and focuses major construction activity to a few locations, leaving other routes available to motorists wishing to avoid construction zones.

Capacity Improvements and New Roads

I-94/Baker Road, Washtenaw County.

This project involves the reconstruction of the existing interchange and the addition of new ramps in response to traffic congestion at this interchange. Heavy truck traffic combined with recent growth in the area generated the need for this project. The environmental clearance phase and the design work for this project have been completed. Right-of-way acquisition is on-going, and will be completed in 2003. Construction will be deferred to a future Five Year Plan. A companion project, the I-94 at Zeeb Road Interchange was recently improved and is open to traffic.

M-59, from I-96 to Old US-23 (Whitmore Lake Road), Livingston County.

The environmental clearance phase for the widening of this segment of M-59 will be completed in 2003. Right-of-way preservation has been underway for several years in this rapidly developing corridor. The completion of subsequent project phases will be deferred to a future Five Year Plan.

US-12, from the Saline East City Limits to Munger Road, Washtenaw County.

This road is currently two-lanes, and congestion has become severe due to development in metropolitan Ann Arbor, and Ypsilanti and Saline. MDOT is working with local communities and citizens groups to evaluate potential improvements. Environmental clearance work will be completed in 2003 which will identify a preferred alternative.

I-94, from M-60 to Sargent Road, Jackson County.

In 2002, a Draft Environmental Impact Statement for the modernization of I-94 through Jackson was completed and approved by the Federal Highway Administration. The Final Environmental Impact Statement and recommended alternative are scheduled to be completed in 2003. The intent of the environmental clearance phase will be to establish a corridor improvement strategy that will examine existing freeway and bridge needs and recommend a plan of action for modernizing and ultimately widening the I-94 freeway throughout the urban area.

I-96/Latson Road/Lake Chemung area interchange, Livingston County

This project will improve access to I-96 east of Howell through an improved Lake Chemung interchange combined with a new interchange at Latson/Nixon Roads. Design for the new Latson/Nixon interchange began in 2001 and will continue through 2003. MDOT will construct safety improvements to the I-96 westbound interchange to Grand River (Lake Chemung). These improvements will be funded with Interstate Maintenance Discretionary Funds provided by Congress.

US-23/M-59 Interchange, Livingston County.

The environmental clearance phase for this interchange project is completed. The interchange is in poor condition and needs to be reconstructed. Design of the recommended alternative, a Single Point Urban Interchange, will be completed in 2003. This project does not include any additional lanes on US-23 or M-59.
